A major step in highlighting the significance of tactile sensing technology and its possible applications was taken by Harmon in 1980 with his review .The potential of this technology was further emphasized by two more papers which followed shortly afterwards , .The unavailability of any design criteria was still a major obstacle to progress.

A review of tactile sensing technologies with applications

There are numerous approaches that could be used to improve or avoid the purification process. One possibility is the use of additional processes that lead to the highest possible degrees of monomer conversion, which could be achieved by conducting three-dimensional polymerization followed by subsequent post-polymerization curing (e.g. by thermal treatment or irradiation of the resulting ...
