A chemical reactor is an enclosed volume in which a chemical reaction takes place. In chemical engineering, it is generally understood to be a process vessel used to carry out a chemical reaction, which is one of the classic unit operations in chemical process analysis. The design of a chemical reactor deals with multiple aspects of chemical engineering.

Process design is the focal point of chemical engineering practice: the creative activity through which engineers continuously improve facility operations to create products that enhance life. Effective chemical engineering design requires students to integrate a broad spectrum of knowledge and intellectual skills, so they can analyze both the big picture and minute details - and know when to ...

In the field of engineering, a chemical engineer is a professional, who is equipped with the knowledge of chemical engineering, works principally in the chemical industry to convert basic raw materials into a variety of products, and deals with the design and operation of plants and equipment. In general, a chemical engineer is one who applies and uses principles of chemical engineering in any ...

American Journal of Chemical Engineering(AJCHE) provides a forum for sharing timely and up-to-date publication of scientific research and review articles. The journal publishes original full-length research papers in all areas related to chemical reaction engineering, environmental chemical engineering, and materials synthesis and processing.

With ion engines, chemical engines, and nuclear torches we're facing a classic Newton's Third Law problem. Somehow the exhaust needs to have sufficient momentum for the opposite reaction to give the ship a good acceleration.

Vessel complexity and limited graphite lifetime (4 years) in contact with the molten fuel salt, oriented ORNL towards the construction of a simpler single-fluid reactor design: the Molten-Salt Reactor Experiment (MSRE) (MacPherson, 1985). This 8 MWth test reactor went critical in 1965 and operated with great success in a thermal neutron spectrum for 4.5 years until its shut down in December 1969.
