Briefly about the book: This new edition of Computational Physics expands the original greatly on both the range of the physics problems treated and the numerical algorithms described. It contains a whole new chapter on the physics of music as well as several new sections such as those discussing the scaling in phase transitions, coupled nonlinear oscillators, two-dimensional time-dependent ...

1.2.1 What is computational physics? Computational physics is a new way of doing physics research, next to experiment and theory. Traditionally, the experimentalist has performed measurements on real physical systems and the theoretical physicist has explained these measurements with his theories.

Physics 3274 is a graduate course on computational physics. It aims to develop or reinforce programming skills, numerical analysis skills, familiarity with some important problems in computational physics, and their methods of solution. The course will employ the C++ language, hence some familiarity with C (or better, C++) is recommended.
