In the domain of central processing unit (CPU) design, hazards are problems with the instruction pipeline in CPU microarchitectures when the next instruction cannot execute in the following clock cycle, and can potentially lead to incorrect computation results. Three common types of hazards are data hazards, structural hazards, and control flow hazards (branching hazards).

The Service-Oriented Architecture (SOA) reference architecture discussed in this article provides a blueprint for an enterprise or application architecture. It also establishes the building blocks of SOA: services, components, and flows that collectively support business processes and goals.
