PRO/II - Wikipedia

This is a list of notable chemical engineers, people who studied or practiced chemical engineering. The main list is those who achieved status in chemical engineering or a closely related field such as management or science. At the foot of the page is a list of people with chemical engineering qualifications who are notable for other reasons, such as actors, sportspeople and authors.

E1-MNL032A - Design and Rating of Shell and Tube Heat

ABSTRACT. This work presents an experimental study of purification of a biogas by removal of its hydrogen sulphide (H_2S) content. The H_2S was removed by means of chemical absorption in an iron-chelated solution catalyzed by Fe/EDTA, which converts H_2S into elemental sulphur (S). Preparation of the catalyst solution and the results of biogas component absorption in the catalyst solution ...

Chemical absorption of H₂S for biogas purification

47 Pressure Changers In this section, we cover two model libraries: the pressure changers. The modules in this library deal with parts of the process that has an effect on changing the pressure

Lo scambiatore a piastre viene impiegato nelle applicazioni di scambio tra svariati tipi di fluidi (acqua

surriscaldata, oli idraulici, vapore ecc.), ed in tutti quei casi in cui bassi coefficienti di scambio dovuti a caratteristiche del liquido, o a basse velocità, richiedono speciali accorgimenti per l'incremento del coefficiente stesso.

1. Introduction. Tapered fluidized beds are used in many industrial processes, including granulation, drying and coating. They are similar in form to spouted beds in which particles are carried upwards in a strong central jet, before slowly returning to the bottom along the margins.

Segregation of particles in a tapered fluidized bed

Il calore specifico, detto anche calore specifico massico, di una sostanza \tilde{c} è definito come la quantità di calore necessaria per innalzare, o diminuire, la temperatura di una unità di massa di 1 K. Una grandezza analoga è il calore specifico molare, detto anche calore molare, definito come la quantità di calore necessaria per innalzare, o diminuire, la temperatura di una mole di sostanza ...
