Algorithmic trading is a method of executing a large order (too large to fill all at once) using automated pre-programmed trading instructions accounting for variables such as time, price, and volume to send small slices of the order (child orders) out to the market over time. They were developed so that traders do not need to constantly watch a stock and repeatedly send those slices out manually.

In computer science, the Boolean data type is a data type that has one of two possible values (usually denoted true and false), intended to represent the two truth values of logic and Boolean algebra.It is named after George Boole, who first defined an algebraic system of logic in the mid 19th century.The Boolean data type is primarily associated with conditional statements, which allow ...

The Algorithmic Beauty of Plants was originally printed by Springer-Verlag in 1990 (second printing 1996). (See our list of known errors from the print version.)An electronic version has been produced using the original LaTeX files and digital illustrations. It is available in two versions: the original version is of higher quality, while the downsampled version is of low quality, but has a ...

This note concentrates on the design of algorithms and the rigorous analysis of their efficiency. Topics covered includes: the basic definitions of algorithmic complexity, basic tools such as dynamic programming, sorting, searching, and selection; advanced data structures and their applications, graph algorithms and searching techniques such as minimum spanning trees, depth-first search ...

Know Thy Complexities! Hi there! This webpage covers the space and time Big-O complexities of common algorithms used in Computer Science. When preparing for technical interviews in the past, I found myself spending hours crawling the internet putting together the best, average, and worst case complexities for search and sorting algorithms so that I wouldn't be stumped when asked about them.
