

enterprise java beans component pdf

A JavaBean is just a plain old Java object that conforms to certain conventions including the use of accessor functions (getFoo/setFoo) for member access, provision of a default constructor and a few other things like that.

Difference between Java Bean and Enterprise Java Beans

37.5 Database Schema Creation. The persistence provider can be configured to automatically create the database tables, load data into the tables, and remove the tables during application deployment using standard properties in the application's deployment descriptor.

37.5 Database Schema Creation - Java Platform, Enterprise

Features. Introspection; Introspection is a process of analyzing a Bean to determine its capabilities. This is an essential feature of the Java Beans API because it allows another application such as a design tool, to obtain information about a component.

JavaServer Faces (JSF) is a Java specification for building component-based user interfaces for web applications and was formalized as a standard through the Java Community Process being part of the Java Platform, Enterprise Edition. It is also a MVC web framework that simplifies construction of user interfaces (UI) for server-based applications by using reusable UI components in a page.
