Cased Hole Log Interpretation Principles/Applications Published in 1989, Cased Hole Log Interpretation Principles/Applications provides a thorough background in cased hole log interpretation, the process by which parameters measured through casing, e.g., thermal decay time and interval transit time, are translated into the desired petrophysical parameters of porosity, hydrocarbon saturation ...

Hydraulic fracturing (also fracking, fraccing, frac'ing, hydrofracturing or hydrofracking) is a well stimulation technique in which rock is fractured by a pressurized liquid. The process involves the high-pressure injection of 'fracking fluid' (primarily water, containing sand or other proppants suspended with the aid of thickening agents) into a wellbore to create cracks in the deep-rock ...

Petroleum engineering is a field of engineering concerned with the activities related to the production of hydrocarbons, which can be either crude oil or natural gas. Exploration and production are deemed to fall within the upstream sector of the oil and gas industry. Exploration, by earth scientists, and petroleum engineering are the oil and gas industry's two main subsurface disciplines ...
