

### ions in aqueous solutions pdf

A metal ion in aqueous solution (aqua ion) is a cation, dissolved in water, of chemical formula  $[M(H_2O)_n]^{z+}$ . The solvation number,  $n$ , determined by a variety of experimental methods is 4 for  $Li^+$  and  $Be^{2+}$  and 6 for elements in periods 3 and 4 of the periodic table. Lanthanide and actinide aqua ions have a solvation number of 8 or 9. The strength of the bonds between the metal ion and water ...

### Metal ions in aqueous solution - Wikipedia

An aqueous solution is a solution in which the solvent is water. It is mostly shown in chemical equations by appending (aq) to the relevant chemical formula. For example, a solution of table salt, or sodium chloride ( $NaCl$ ), in water would be represented as  $Na^+(aq) + Cl^-(aq)$ . The word aqueous (comes from aqua) means pertaining to, related to, similar to, or dissolved in, water.

Polyhedron publishes original, fundamental, experimental and theoretical work of the highest quality in all the major areas of inorganic chemistry. This includes synthetic chemistry, coordination chemistry, organometallic chemistry, bioinorganic chemistry, and solid-state and materials chemistry. Papers should be significant pieces of work, and all new compounds must be appropriately characterized.

The uptake of heavy metal ions by ion-exchange resins is rather affected by certain variables such as pH, temperature, initial metal concentration and contact time (Gode and Pehlivan, 2006). Ionic charge also plays an important role in ion-exchange process.
