

### **lasers in chemistry pdf**

Lasers are distinguished from other light sources by their coherence. Spatial coherence is typically expressed through the output being a narrow beam, which is diffraction-limited. Laser beams can be focused to very tiny spots, achieving a very high irradiance, or they can have very low divergence in order to concentrate their power at a great distance.

A free-electron laser (FEL) is a kind of laser whose lasing medium consists of very-high-speed electrons moving freely through a magnetic structure, hence the term free electron. The free-electron laser is tunable and has the widest frequency range of any laser type, currently ranging in wavelength from microwaves, through terahertz radiation and infrared, to the visible spectrum, ultraviolet ...

The classroom activity articles described and linked to this page were developed by The Space Place staff. They have all been published in past issues of the International Technology and Engineering Educator's Association's (ITEEA) journal The Technology Teacher.. We are now making them available in Adobe Acrobat (.pdf) format so that all teachers may use them.
