Optimal control theory deals with the problem of finding a control law for a given system such that a certain optimality criterion is achieved.. It is an extension of the calculus of variations, and is a mathematical optimization method for deriving control policies.The method is largely due to the work of Lev Pontryagin and Richard Bellman in the 1950s, after contributions to calculus of ...

Model predictive control (MPC) is an advanced method of process control that is used to control a process while satisfying a set of constraints. It has been in use in the process industries in chemical plants and oil refineries since the 1980s. In recent years it has also been used in power system balancing models and in power electronics.Model predictive controllers rely on dynamic models of ...

Abstract: Strongly nonlinear perturbation theory would seem to be an oxymoron, that is, a contradiction of terms. Nonetheless, we here describe perturbation methods for wave categories that are intrinsically nonlinear including solitons (solitary waves), bound states of solitons (bions) and spatially periodic traveling waves (cnoidal waves).

May the force be with you: By using intermolecular forces to artificially control the assembly of DNA sheets, a multimodal analytical system was developed that allows five readouts and dual qualitative/quantitative analysis. This satisfies both point-of-care testing (POCT) and laboratory-based testing. This was used to diagnose Mycoplasma Pneumoniae infection and could eradicate ...
