It presents the mathematical background of signals and systems, including the Fourier transform, the Fourier series, the Laplace transform, the discrete-time and the discrete Fourier transforms, and the z-transform. The text integrates MATLAB examples into the presentation of signal and system theory and applications.

Phillips, Parr & Riskin, Signals, Systems, & Transforms

A system can be viewed as mapping a set of input signals to a set of output or response signals. A more general view is that a system is an entity imposing constraints on a designated set of signals, where the signals are not necessarily linear.
